Hypertension Care Plan

Diagnosis: stage 2 essential hypertension, average home blood pressure 152/96 mmHg. Target blood pressure: below 130/80 mmHg.

Medication: lisinopril 10 mg once daily in the morning. Check potassium and creatinine 2 weeks after starting. A dry cough is a known side effect; report it rather than stopping the drug.

Lifestyle and Monitoring

Limit sodium to less than 2 grams per day. Aim for 150 minutes of moderate exercise per week. Limit alcohol to one drink per day.

Measure blood pressure at home twice daily for 7 days before each visit and bring the log. Seek emergency care for a reading above 180/120 mmHg with chest pain, headache or vision changes.
