Laboratory Report - Fasting Lipid Panel

Patient: Jane Roe (fictional), 54 years old. Sample collected after a 12-hour fast.

Total cholesterol: 241 mg/dL (desirable below 200). LDL cholesterol: 162 mg/dL (optimal below 100). HDL cholesterol: 38 mg/dL (low, desirable above 40). Triglycerides: 205 mg/dL (borderline high, normal below 150).

Interpretation: elevated LDL and triglycerides with low HDL. Lifestyle changes are recommended and statin therapy should be discussed with the physician. Repeat the lipid panel in 3 months.
